

Philosophy 3334 Summer 2018

Reading questions #19

Due Mon, July 2

1) Read Rosenberg et al.'s "Genetic Structure of Human Populations" (look at the online version to see the colorful charts) and also Bolnick's Individual Ancestry Inference and the reification of race as a biological phenomenon. When Rosenberg's group ran the program structure with $K=5$, what were the five clusters that the program picked out? When K was changed to $K=6$, what was the new sixth group?

2) After reading the chapter, come up with a question that you want answered or a topic that you would like to be discussed. This could be something that the chapters forced you think about or it could be something that you thought was particularly confusing in the chapters.
